SUMMARY

Data Scientist with industry experience in time series, deep learning and NLP. Currently generating and validating synthetic financial data with TimeGAN and building deep learning and reinforcement learning models for trading. Part-time, I build and deploy ML features on AWS for a US pharmacy-tech company. M.Sc. student in Statistics at Cairo University.

EDUCATION

Cairo University <i>M.Sc. in Statistics (Data Science Track), Faculty of Graduate Studies for Statistical Research</i>	Cairo, Egypt 2024 – 2027 (expected)
Helwan University <i>B.Sc. in Computer Science and Artificial Intelligence, Grade: Very Good</i>	Cairo, Egypt 2020 – 2024

EXPERIENCE

Data Scientist <i>Limitless Labs Egypt</i>	Aug 2025 – Present <i>Cairo, Egypt (On-site)</i>
- Generate synthetic financial time series with TimeGAN to augment limited market data for model training. - Validate synthetic data with statistical tests: return distributions, autocorrelation and stylized facts. - Build deep learning and reinforcement learning models for trading.	
AI & ML Solutions Engineer (Part-Time) <i>Banyan</i>	Nov 2024 – Present <i>Remote, USA</i>
- Build and deploy AI features for a pharmacy optimization platform, from data analysis to production on AWS. - Develop data pipelines and ML models for trend detection that support the drug recommendation engine. - Work in a 7-person team with PostgreSQL, .NET APIs and React.	
IBM Data Science Intern <i>Digital Egypt Pioneers Initiative (DEPI)</i>	Jun 2024 – Oct 2024 <i>Hybrid</i>
Built Power BI and Excel dashboards, engineered features for ML models and practiced cloud deployment.	
Machine Learning Instructor <i>IEEE FCIH Helwan University & MSP Tech Club Helwan</i>	Jul 2022 – Feb 2024 <i>Cairo, Egypt</i>
- Taught ML fundamentals to 100+ students at IEEE and supervised their final projects. - Led an 8-session ML/DL workshop at MSP for 80+ attendees, with 90% positive feedback.	

TECHNICAL PROJECTS

Retail Sales Forecasting <i>Prophet, XGBoost, LSTM, MLflow, Streamlit</i>	Code Demo
Compared three models with a linear baseline for daily store sales, tracked in MLflow and deployed with Streamlit.	
ChatPDF with RAG <i>LangChain, Embeddings, Vector Search, LLMs</i>	Code
Q&A over PDF files that retrieves the most relevant chunks, so answers stay grounded in the document.	
Invoice Scraper with NER <i>Python, Web Scraping, NER</i>	Code
Automated daily invoice collection and extracted PO numbers, vendor names and key fields with a NER model.	
Video Summarization <i>Python, NLP, Transformers</i>	Code
Summarizes long videos from their subtitles, cutting length by about 70% while keeping the key points.	

SKILLS, CERTIFICATIONS & LANGUAGES

Programming: Python, SQL
ML & Deep Learning: scikit-learn, PyTorch, TensorFlow, XGBoost, GANs, LSTM, CNN, Reinforcement Learning
Time Series & Statistics: TimeGAN, Forecasting, Synthetic Data Evaluation, Hypothesis Testing
NLP & LLMs: RAG, LangChain, Transformers, NER
MLOps & Tools: AWS, Docker, MLflow, Streamlit, Git, Linux, PostgreSQL, Power BI
Certifications: ML Specialization (Stanford), TensorFlow Developer (DeepLearning.AI), IBM Data Science
Languages: Arabic (Native), English (Very Good)
